Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 20-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Willis(6,389,453).

With regards to claim 20 Willis teaches a method comprising:
Transmitting IP packets(IP multicast packets) from a digital content server system(Fig. 1@15, source network) through an extraterrestrial satellite(Fig. 1@45) to a remote IP compatible network(Fig. 1@43, 27, 35); receiving said IP packets at an integrated satellite receiver in communication with said remote IP compatible network(Fig. 1@43) and routing said packets from a routing processor mounted within said integrated satellite receiver(Fog 1@27, layer 3 router) to a remote IP compatible receiving system in communication with said IP compatible network(Fig. 1@35); and

separately transmitting TCP/IP packets from said digital content server system through Internet infrastructure to said remote IP compatible receiving system. (the system in Fig. 1 is capable of bi-directional communication over the internet between source and client. The protocol is TCP/IP)

With regards to claim 21, Willis teaches IP multicast packets being transmitted (col 1 lines 25-34).

With regards to claim 22, routing IP multicast packet by a processor that included an IGMP compatible mode is inherently taught because Willis teaches transmitting IP multicast packets. IGMP is used by multicast routers, to locate and identify multicast group members, on their distinctly attached subnets. (IGMP is defined in RFCs 1112 Appendix A and 1122 section 3.2.3). Hence it is a necessary feature in Willis.
